

AUTOMOTIVE EMBEDDED SOFTWARE & ENGINEERING

Company Portfolio

Founded 2013 · Jaipur, Rajasthan, India

AUTO-CAN Solutions is a specialist automotive embedded software and engineering partner, founded in 2013 in Jaipur, India. What began as a focused Hardware-in-the-Loop (HiL) testing practice has grown, one vertical at a time, into full-cycle capability across Testing, Development, and R&D. We work as a trusted engineering partner to OEMs and Tier-1 suppliers worldwide — backed by a buffered engineering bench and in-house staffing, people management, and payroll support that keeps every engagement running smoothly, whichever model you choose.

Our Journey

What We Do

Testing

- HiL, SiL & MiL testing
- Integration & system validation
- Regulatory & proving-ground testing
- Test automation frameworks

Development

- Embedded SW stacks: BSW, CAN, LIN, UDS
- Bootloader & flashing tools
- Embedded hardware design
- Calibration & diagnostic tools

R&D

- AUTOSAR & Functional Safety (ISO 26262)
- ADAS & Automotive Ethernet
- Cybersecurity & V2X connectivity
- OTA & next-gen mobility tech

Domain Expertise

FOUNDATIONAL

MISRA C · Embedded Linux · CAN Protocol · FlexRay

NEXT-GENERATION

AUTOSAR · ISO 26262 · ADAS · OTA · Cybersecurity · V2X

How You Can Engage Us

ODC — Offshore / On-site Development Centre

A dedicated engineering pod out of our Jaipur, Pune, or Bangalore centres, functioning as a true extension of your team. Best for long-term, program-based work.

Deputation — On-Site Talent Deployment

Engineers deployed directly at your site, embedded in your team, while remaining on our payroll. Best for on-demand or project-specific augmentation.

People, Payroll & Staffing — Handled In-House

Staffing & Resource Planning

Every engineer matched to the right domain and engagement model from day one.

People Management

Named reporting managers, regular check-ins, and clear career-path conversations.

Payroll & Compliance

Transparent, on-time payroll with full statutory compliance — PF, ESI, taxation.

Benefits & Well-being

Health insurance, structured leave, and support built for demanding programs.

Buffer bench for rapid scale-up

“To be the specialist engineering partner automotive OEMs and Tier-1 suppliers turn to when a program can't afford to get embedded software wrong.”

Why Choose AUTO-CAN

A Decade in One Lane

We didn't pivot into automotive — we started there in 2013 and never left.

Full Lifecycle, One Partner

From HiL validation to production-ready embedded stacks to forward R&D — no vendor handoffs.

Standards-First Culture

MISRA C, AUTOSAR, and ISO 26262 aren't add-ons — they're how every engineer is trained.

Built for Scale & Speed

A buffered bench means we staff up fast without compromising on domain fit.

Campus Connect — Training, Internships & Careers

For Students & Graduates

- Structured induction covering automotive embedded software fundamentals
- Training tracks mapped to Testing, Development & R&D specializations
- Mentorship from engineers with 10+ years of domain experience
- Hands-on time with Vehicle Simulator, Diagnostic & Flashing tools
- A real path into live OEM / Tier-1 programs via ODC or Deputation

For Colleges & Institutes

- Campus hiring drives across our Jaipur, Pune & Bangalore centres
- Structured internship programs with real project exposure
- Institute training tie-ups & curriculum collaboration
- A continuous talent pipeline feeding both ODC teams and client sites
- Direct faculty coordination for placement & pre-placement drives
